

Geography Transition Work

Following the work completed in the Taster Day sessions, continue to look at items in the news over the summer – via newspapers, TV, radio or the internet – that relate to Geography. Aim to find news items connected with our main syllabus topics next year (changing places, Water and carbon Cycles and Coastal Systems), but they can be on any aspect related to Geography.

You do 2-3 fairly short events/reports, or one in depth. How you present the information is up to you.

The following are suggestions:

- A poster, with the articles cut/printed out and stuck in, with your annotations of how they link with geography around them
- A written report, summarising each event/report (in your own words, not just a copy and paste please) and how they/it links with geography
- An electronic account – e.g. using Educreations/i-movie, and recording the events and your thoughts about the links with geography

Please bring your work with you to the first lesson in September
